CATALYTIC ACTIVITY: L-3-hydroxykynurenine + H(2)0 = 3-hydroxyanthranilate + L-alanine.

COFACTOR: PYRIDOXAL PHOSPHATE.

ENZYME REGULATION: INHIBITED BY O-METHYLBENZOYLALANINE PATHWAY: INVOLVED IN THE BIOSYNTHESIS OF NAD COFACTORS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HYDROXYANTHRANILIC ACIDS (3-OHAA), RESPECTIVELY. HAS A PREFER FOR THE L-3-HYDROXY FORM. DETIMUM ACTIVITY IS AROUND PH 9.0 F KYN AND AROUND 8.5 FOR L-3OHKYN. ALSO HAS CYSTEINE-CONJUGATE-BETA-LYASE ACTIVITY.

CATALYTIC ACTIVITY: L-kynurenine + H(2)0 = anthranilate + L-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      European Bioinformatics Institute. Catalyzes the production of HC-toxin: a cyclic tetrapeptide. Activates and thioesterifies L-Pro, and epimerizes it to D-Pro; also uses D-Ala as a substrate but this is epimeriz.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   COFACTOR:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            seq
